Hardware change for Cyclus 3 RAM-Auto Power Off

For this function, two resistors are needed, 100kOhm and 200kOhm. Solder the 100k between ground and pin 7 of U1 and the 200k between pin 7 of U1 and the positive solder leg of C1. They can easily be soldered on backside. Please make sure that the long legs of the 200k may not contact any other pin.

At the end it may look like this:
